

Biological Sampling Priority Matrix

Created in February 2023
For FY2024

*Our vision is to be the principal source of fisheries-dependent information
on the Atlantic coast through the cooperation of all program partners.*

Biological Review Panel Recommends:

- Species in the upper 25% of the priority matrix should be considered for funding.
- Sampling projects which cover multiple species within the upper 25% are highly recommended.

Biological Review Panel Recommendations Based on Matrix:

Biological Sampling Priority Matrix

- Grouping of species in upper 25% of total matrix score, based on sampling adequacy and average priority (average of ASMFC, Council, NMFS and State priorities).
- Projects that target multiple upper quartile species should be given a higher priority.

		Biological Sampling Adequacy	
		Adequate (0 - 2)	Inadequate (3 - 5)
Averaged Priority Columns	High (≥ 3.0)		Black Sea Bass - Cobia - Spanish Mackerel
	Low (< 3.0)	Red Snapper - Shortfin Mako Shark - Spiny Dogfish - Vermillion Snapper	American Eel - American Lobster - American Shad - Atlantic Halibut - Atlantic Menhaden - Bluefin Tuna - Blueline Tilefish - Finetooth Shark - Gag Grouper - Gray Triggerfish - Red Grouper - River Herring - Snowy Grouper - Tilefish
